- Toxicity to algae: no data available
- Toxicity to microorganisms: no data available

**12.2 Persistence and degradability**

no data available

**12.3 Bioaccumulative potential**

Based upon an experimental water solubility of 39.05 mg/l(1), the BCF of (2-bromoethyl)benzene can be estimated to be approximately 78 from a regression-derived equation(2). This estimated BCF value suggests that bioconcentration in aquatic organisms may be an important fate process(SRC).

**12.4 Mobility in soil**

Using a structure estimation method based on molecular connectivity indices, the Koc for (2-bromoethyl)benzene can be estimated to be about 955(1). The Koc for (2-bromoethyl)benzene can also be estimated to be about 582 based on an experimental water solubility of 39.05 mg/l(3) and a regression derived equation(2). According to a suggested classification scheme(4), these estimated Koc values suggest that (2-bromoethyl)benzene has low soil mobility.

**12.5 Other adverse effects**

**SECTION 13: Disposal considerations****13.1 Disposal methods****Product**

The material can be disposed of by removal to a licensed chemical destruction plant or by controlled incineration with flue gas scrubbing. Do not contaminate water, foodstuffs, feed or seed by storage or disposal. Do not discharge to sewer systems.

#### **Contaminated packaging**

Containers can be triply rinsed (or equivalent) and offered for recycling or reconditioning. Alternatively, the packaging can be punctured to make it unusable for other purposes and then be disposed of in a sanitary landfill. Controlled incineration with flue gas scrubbing is possible for combustible packaging materials.
