Immediate first aid: Ensure that adequate decontamination has been carried out. If patient is not breathing, start artificial respiration, preferably with a demand-valve resuscitator, bag-valve-mask device, or pocket mask, as trained. Perform CPR as necessary. Immediately flush contaminated eyes with gently flowing water. Do not induce vomiting. If vomiting occurs, lean patient forward or place on left side (head-down position, if possible) to maintain an open airway and prevent aspiration. Keep patient quiet and maintain normal body temperature. Obtain medical attention. Aldehydes and Related Compounds

12.2 Persistence and degradability

AEROBIC: alpha-Amyl cinnamaldehyde, present at 100 mg/L, reached 51% of its theoretical BOD in 4 weeks using an activated sludge inoculum at 30 mg/L in the Japanese MITI test(1). Using OECD Method 301B (CO2 evolution), alpha-amyl cinnamaldehyde had a 65% degradation in 28 days indicating it was readily biodegradable(2). Using OECD Method 301F (Respirometric method/SAPROMAT), alpha-amyl cinnamaldehyde had a 90% degradation 28 days indicating it was readily biodegradable(2).

12.3 Bioaccumulative potential

An estimated BCF of 586 was calculated in fish for alpha-amyl cinnamaldehyde(SRC), using a log Kow of 4.70(1) and a regression-derived equation(2). According to a classification scheme(3), this BCF suggests the potential for bioconcentration in aquatic organisms is high(SRC), provided the compound is not metabolized by the organism(SRC).

12.4 Mobility in soil

Using a structure estimation method based on molecular connectivity indices(1), the Koc of alpha-amyl cinnamaldehyde can be estimated to be 680(SRC). According to a classification scheme(2), this estimated Koc value suggests that alpha-amyl cinnamaldehyde is expected to have low mobility in soil.

12.5 Other adverse effects

no data available

SECTION 13: Disposal considerations

13.1 Disposal methods

Product

The material can be disposed of by removal to a licensed chemical destruction plant or by controlled incineration with flue gas scrubbing. Do not contaminate water, foodstuffs, feed or seed by storage or disposal. Do not discharge to sewer systems.

Contaminated packaging

Containers can be triply rinsed (or equivalent) and offered for recycling or reconditioning. Alternatively, the packaging can be punctured to make it unusable for other purposes and then be disposed of in a sanitary landfill. Controlled incineration with flue gas scrubbing is possible for combustible packaging materials.
