## **12.3 Bioaccumulative potential**

An estimated BCF of 78 was calculated for bisacodyl(SRC), using an estimated log Kow of 3.37(1) and a regression-derived equation(2). According to a classification scheme(3), this BCF suggests the potential for bioconcentration in aquatic organisms is

moderate(SRC), provided the compound is not altered physically or chemically once released into the environment(SRP).

## 12.4 Mobility in soil

Using a structure estimation method based on molecular connectivity indices(1), the Koc for bisacodyl can be estimated to be 85,000(SRC). According to a classification scheme(2), this estimated Koc value suggests that bisacodyl is expected to be immobile in soil.

## 12.5 Other adverse effects

no data available

---

# SECTION 13: Disposal considerations

## 13.1 Disposal methods

### Product

The material can be disposed of by removal to a licensed chemical destruction plant or by controlled incineration with flue gas scrubbing. Do not contaminate water, foodstuffs, feed or seed by storage or disposal. Do not discharge to sewer systems.

### Contaminated packaging

Containers can be triply rinsed (or equivalent) and offered for recycling or reconditioning. Alternatively, the packaging can be punctured to make it unusable for other purposes and then be disposed of in a sanitary landfill. Controlled incineration with flue gas scrubbing is possible for combustible packaging materials.
