- Toxicity to microorganisms: EC50 - activated sludge of a predominantly domestic sewage - > 10 mg/L - 3 h. Remarks: Respiration rate.

### 12.2 Persistence and degradability

Biodegradation data on bis(2-ethylhexyl) terephthalate were not available(SRC, 2008); however, bis(2-ethylhexyl) phthalate, a structurally similar compound, is reported to undergo aerobic(1,2) and possibly anaerobic biodegradation(3,4). Therefore, biodegradation is likely to be an important fate process for bis(2-ethylhexyl) terephthalate.

### 12.3 Bioaccumulative potential

An estimated BCF of 25 was calculated in fish for bis(2-ethylhexyl) terephthalate(SRC), using an estimated log Kow of 8.39(1) and a regression-derived equation(2). According to a classification scheme(3), this BCF suggests the potential for bioconcentration in aquatic organisms is low(SRC).

### 12.4 Mobility in soil

The Koc of bis(2-ethylhexyl) terephthalate is estimated as 2,000(SRC), using a water solubility of 4 mg/L(1) and a regression-derived equation(2). According to a classification scheme(3), this estimated Koc value suggests that bis(2-ethylhexyl)terephthalate is expected to have slight mobility in soil.

### 12.5 Other adverse effects

no data available

---

## SECTION 13: Disposal considerations

### 13.1 Disposal methods

**Product**

The material can be disposed of by removal to a licensed chemical destruction plant or by controlled incineration with flue gas scrubbing. Do not contaminate water, foodstuffs, feed or seed by storage or disposal. Do not discharge to sewer systems.

**Contaminated packaging**

Containers can be triply rinsed (or equivalent) and offered for recycling or reconditioning. Alternatively, the packaging can be punctured to make it unusable for other purposes and

then be disposed of in a sanitary landfill. Controlled incineration with flue gas scrubbing is possible for combustible packaging materials.
