SECTION 12: Ecological information

12.1 Toxicity

- Toxicity to fish: LC50 - *Oncorhynchus mykiss* (previous name: *Salmo gairdneri*) - > 0.1 mg/L - 96 h.
- Toxicity to daphnia and other aquatic invertebrates: EC50 - *Daphnia magna* - ca. 3.4 mg/L - 48 h.
- Toxicity to algae: EC50 - *Desmodesmus subspicatus* (previous name: *Scenedesmus subspicatus*) - 6.5 mg/L - 72 h.
- Toxicity to microorganisms: EC50 - activated sludge - > 10 mg/L - 3 h.

12.2 Persistence and degradability

Resting cells of a *Pseudomonas* strain obtained by selective enrichment with 4-hydroxybenzoate as the sole carbon source, were able to biodegrade 2-t-butylphenol (oxygen uptake rate 26 nmol O₂/min/mg protein)(1). 4-t-Butylphenol (at 30 mg/l) was not biodegraded over a 2 week period using an activated sludge inoculum; in river and sea water 4-t-butylphenol showed 11% biodegradation over 3 days(3). By analogy to 4-t-butylphenol, 2-t-butylphenol may be recalcitrant to biodegradation in the environment(SRC).

12.3 Bioaccumulative potential

An estimated BCF value of 190 was calculated for 2-t-butylphenol(SRC), using an experimental log K_{ow} of 3.31(1) and a recommended regression-derived equation(2). According to a recommended classification scheme(3), this BCF value suggests that bioconcentration in aquatic organisms may be an important fate process(SRC). This compound was rapidly taken up by zebra fish with a steady state concentration reached within 5 hours; the clearance phase required 6 hours(3).

12.4 Mobility in soil

The K_{oc} of 2-t-butylphenol is estimated as approximately 1500(SRC), using an experimental log K_{ow} of 3.31(1) and a regression-derived equation(2,SRC). According to a recommended classification scheme(3), this K_{oc} value suggests that 2-t-butylphenol has low mobility in soil(SRC).

12.5 Other adverse effects

no data available

SECTION 13: Disposal considerations

13.1 Disposal methods

Product

The material can be disposed of by removal to a licensed chemical destruction plant or by controlled incineration with flue gas scrubbing. Do not contaminate water, foodstuffs, feed or seed by storage or disposal. Do not discharge to sewer systems.

Contaminated packaging

Containers can be triply rinsed (or equivalent) and offered for recycling or reconditioning. Alternatively, the packaging can be punctured to make it unusable for other purposes and then be disposed of in a sanitary landfill. Controlled incineration with flue gas scrubbing is possible for combustible packaging materials.
